

Recommended Tools

Drill (for screw installation)

Goal Signage Installation

Step 1: Remove all hardware and organize pieces based on color coding.

Note: One goal sign will have blank color tabs, while the other will have an "X" marked on the tab. All holes are pre-drilled.

Step 2: Connect the main long pipes to the side pipes using the connectors.

Match each connection point using the corresponding-colored stickers.

Step 3 (Optional): Plugs are provided for the base piece. You may add sand inside for additional weight if desired.

Step 4: Push all pieces together fully and align the holes. Pipes should slide easily into place and lock securely.

Step 5: Drill screws into all corners to secure.

Step 6: Install the pillowcase cover, pull it underneath. Ensure the fabric sits flush and evenly across the frame, and fasten using Velcro.

Step 7: Verify that all connections are tight and secure. Ensure the structure is level and stable. Gently shake the frame to confirm sturdiness before use.
